

OSI LaserScan

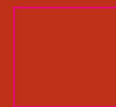

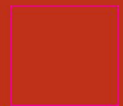

**Accuracy
Matters**

OSI LaserScan Profile

OSI LaserScan, a division of OSI Optoelectronics, based in Hawthorne, California, was founded in 2003 following the acquisition of the Sensor Business Unit of Schwartz Electro-Optics (SEO).

OSI LaserScan has developed a variety of patented laser scanning systems for commercial and industrial use. These products are based on research and development activities going back to 1992 – 1993, when the first patents for OSI LaserScan's technology were awarded.

■ **AS 615**
Single lane overhead vehicle detection and classification system

■ **AS 700 Series**
Single lane-barrier environment axle classifier

Products & Services for Vehicle Detection and Vehicle Classification

AutoSense™

As a leader in advanced laser range finding and scanning technology, OSI LaserScan has developed the sophisticated AutoSense™ range of vehicle detection and classification sensors which are used across a wide range of Intelligent Transportation System (ITS) applications.

OSI LaserScan is now producing the third generation of AutoSense™ vehicle detection and classification products. This generation of AutoSense™ is our most sophisticated and reliable to date and meets all regulatory requirements in major markets. AutoSense™ offers the unique combination of high accuracy and high reliability with proven, cost-efficient technology.

Idris™

The inductive loop-based Idris technology is owned and developed by the UK-based company Diamond Consulting Services Ltd (DCS). OSI LaserScan is an Idris Technology Partner (ITP), responsible for the implementation, integration and promotion of Idris solutions. OSI LaserScan's Idris certified engineers have undergone specialist training to qualify them to assist with Idris Technology solutions, including hardware, software and associated services.

An Innovative Technology Company
